

QUANTUM
VECTOR

From DevOps Community

DevOps & AWS + AI Training Programme

Comprehensive Course Curriculum

From Fundamentals to Production-Ready Skills

Key Technologies Covered

Linux • Shell Scripting • Git • Maven • Jenkins • Ansible • Docker • Kubernetes
Terraform • Prometheus • Grafana • AWS Cloud Services • DevSecOps • SRE

Hands-on Labs • Real-World Projects • CI/CD Pipeline Implementation
Cloud Infrastructure • Container Orchestration • Infrastructure as Code

Quantum Vector | From DevOps Community

Nandini Residency, near JNTU, Kukatpally, Hyderabad, Telangana 500085

Course Index

PART I — DEVOPS FOUNDATIONS

- Module 1: DevOps Introduction & Culture
- Module 2: Linux Administration
- Module 3: Shell Scripting (Bash)
- Module 4: Python for DevOps
- Module 5: Networking Fundamentals

PART II — SOURCE CODE & BUILD MANAGEMENT

- Module 6: Git & Version Control
- Module 7: Maven — Build Automation
- Module 8: Artifact Management (Nexus / JFrog)
- Module 9: Code Quality — SonarQube

PART III — CI/CD & AUTOMATION

- Module 10: Jenkins — Continuous Integration & Delivery
- Module 11: AWS CodePipeline, CodeBuild & CodeDeploy

PART IV — CONFIGURATION MANAGEMENT

- Module 12: Ansible — Configuration & Automation

PART V — CONTAINERIZATION & ORCHESTRATION

- Module 13: Docker — Containerization
- Module 14: Kubernetes — Container Orchestration

PART VI — INFRASTRUCTURE AS CODE

- Module 15: Terraform — Infrastructure Provisioning
- Module 16: Packer — Machine Image Automation

PART VII — MONITORING & OBSERVABILITY

- Module 17: Prometheus & Grafana
- Module 18: AWS CloudWatch & CloudTrail

PART VIII — AWS CLOUD SERVICES

- Module 19: Cloud Computing Fundamentals
- Module 20: EC2 — Elastic Compute Cloud
- Module 21: IAM — Identity & Access Management
- Module 22: VPC — Virtual Private Cloud
- Module 23: S3 — Simple Storage Service

Module 24: EBS — Elastic Block Store
Module 25: ELB — Elastic Load Balancing
Module 26: Auto Scaling
Module 27: RDS — Relational Database Service
Module 28: Route 53, CloudFront & SNS
Module 29: Serverless — Lambda & API Gateway
Module 30: AWS CloudFormation
Module 31: AI Services — AWS Bedrock

PART IX — ADVANCED TOPICS

Module 32: DevSecOps
Module 33: Site Reliability Engineering (SRE)
Module 34: AI Tools for DevOps

MODULE I | DEVOPS FOUNDATIONS

Module 1: DevOps Introduction & Culture

- What is Application Software — Application Overview
- What is DevOps — Definition & Stakeholders
- Why DevOps — Business, IT, Developer, Tester & Operations Perspectives
- Software Development Life Cycle (SDLC) — Phases & Types
- Waterfall vs Agile Methodology
- Agile & Scrum — Sprints, Roles of Dev and Ops
- Continuous Integration (CI), Continuous Delivery (CD) & Continuous Deployment
- DevOps Culture & End-to-End DevOps Workflow
- Cloud Importance & Principles of DevOps
- Making a DevOps Transition — Problems DevOps Solves
- DevOps Technology Stack Overview

Module 2: Linux Administration

- What is an Operating System — Types of Operating Systems
- Linux Architecture — Kernel, Shell & Hardware Resources
- Linux Distributions — CentOS, Ubuntu, Red Hat
- Installing Virtual Box & CentOS/Ubuntu
- Launching Your First Linux Operating System
- Day-to-Day Commands (ls, cd, pwd, mkdir, cp, mv, rm, find, grep, etc.)
- File & Directory Management
- Linux Permissions (chmod, chown, chgrp, umask)
- User & Group Management — CLI & Graphical Methods
- VI/VIM Editor — Commands & Shortcuts
- Process Management (ps, top, kill, sar)
- System Performance Monitoring Commands
- Package Management — YUM, APT, RPM, DEB, SNAP
- Disk & Filesystem Management — Partitions, LVM, Mounts
- Linux Networking — IP Configuration, SSH, SCP, Rsync
- SSH Key Generation & Passwordless Authentication
- Service Management — Init & Systemd
- Server Configurations — Web Server, App Server, Syslog, DB Servers
- Linux Advanced Commands (sed, awk, cut, tee, xargs)
- Troubleshooting in Linux

■ Hands-On Labs:

- Setting up Linux VMs in VirtualBox
- User creation, permissions & group management
- Package installation & service management
- Disk partitioning & mount operations

Module 3: Shell Scripting (Bash)

- Introduction — What is Shell? Types of Shells

- Writing Your First Shell Script
- File Naming Conventions & Comments
- Variables, Arrays & Variable Scopes
- Command Line Arguments & Special Variables
- Escape Characters & Strings
- Arithmetic Operations
- User Interaction — read Command
- Input/Output Redirection & Pipes
- Control Structures — if, for, while, switch-case
- Functions in Shell Scripts
- Regular Expressions
- Command Piping with grep
- Stream Editor (sed) — Basics & Commands
- AWK Fundamentals
- Real-Time Automation Scripts

■ **Hands-On Labs:**

- Automating user management with shell scripts
- Writing cron jobs for scheduled tasks
- Building log parsing and monitoring scripts

Module 4: Python for DevOps

- Introduction — Why Python for DevOps?
- Installation & Python 2 vs Python 3
- Data Types — Integers, Floats, Strings, Booleans, Lists, Dictionaries
- Statements — if, Loops, Break, Continue, While
- Functions & Lambda Functions
- File Management & Exception Handling
- Yield & Generators
- Object Oriented Programming — Classes, Methods, Constructors, Inheritance
- Strings, Collections & Modularity
- Python Tips & Tricks for Automation

Module 5: Networking Fundamentals

- Basic Networking Concepts — Protocols, IP Addresses, DNS
- OSI Model — All 7 Layers Explained
- TCP/IP Model vs OSI Model
- IP Addressing — IPv4 Format, Classes A/B/C/D/E, CIDR Notation
- IP Subnetting & Subnet Masks
- Routing & Switching Basics
- NAT, DNS & DHCP Servers
- Network Categories & Components
- Binary & Hexadecimal Compute Basics

MODULE II | SOURCE CODE & BUILD MANAGEMENT

Module 6: Git & Version Control

- Version Control Basics — What is VCS? What is SCM?
- Git Installation & Configuration
- Git Core Commands — init, add, commit, status, log, diff
- Branches — Creating, Switching, Merging & Deleting
- Git Stash — Saving Work in Progress
- Branching In Depth — Branching Strategy, Git Flow
- Rebase vs Merge
- Tagging — Lightweight & Annotated Tags
- Remote Repositories — Clone, Push, Pull, Fetch
- Pull Requests & Code Review Workflow
- SSH Key Generation for Git
- GitHub, GitLab & BitBucket — Account Setup & Usage
- GitHub API — Real-Time Shell Script Examples
- Forking Repositories
- Sub-Projects with Sub-Modules & SubTrees
- Git Hooks — Pre-commit, Post-commit
- Git Administration
- README Files & Best Practices for Commits

■ Hands-On Labs:

- Initialize local Git repo, create & push branches
- Merging, rebasing & resolving conflicts
- Setting up SSH keys and connecting to remote repos
- Working with pull requests on GitHub/GitLab

Module 7: Maven — Build Automation

- Introduction to Build Tools & Build Automation
- Maven Environment Setup & Installation
- Maven Directory Structure
- Understanding pom.xml — Content & Configuration
- Maven Build Life Cycle — validate, compile, test, package, install, deploy
- Maven Build Profiles & Repositories
- Maven Plugins & Goals
- Maven Snapshots & Releases
- Maven Multi-Module Projects — Parent POM & Child POM
- Maven Dependency Management
- Maven Web Application & Deployment Automation
- Integration with CI/CD Pipelines

■ Hands-On Labs:

- Maven integration plugin in Jenkins
- Setting up Maven goals & Git connectivity

Module 8: Artifact Management — Nexus & JFrog

- What are Artifact Repositories? Purpose of Maintaining Artifacts
- Nexus — Prerequisites, Installation & User Interface
- JFrog Artifactory — Installation on EC2
- Release vs Snapshot — Differences & Use Cases
- Integrating JFrog/Nexus with Maven
- Integrating Artifact Repositories with Jenkins

Module 9: Code Quality — SonarQube

- Introduction to Code Quality Analysis
- SonarQube Setup & Configuration
- PMD, Checkstyle & JaCoCo Integration
- Integrating SonarQube with Jenkins Pipeline

MODULE III | CI/CD & AUTOMATION

Module 10: Jenkins — CI/CD Server

Core Concepts

- Introduction — CI, CD & Continuous Deployment
- Jenkins Architecture & Key Constructs (Job, Build, VCS, Plugins, CLI, REST API)
- Jenkins Internals — Execution Under the Hood, Environment Variables
- Jenkins Installation on Linux Server
- Jenkins Directory Structure

Project Configuration

- Free Style Projects & Maven Project Type
- Parameterized Builds — Build with Parameters
- Upstream & Downstream Jobs
- Poll SCM, Build Periodically & Git WebHooks
- Email Notifications & Slack Notifications
- Discard Old Builds, Disable Projects
- Delete Workspace Before Build, Console Timestamps

Pipelines & Advanced

- Jenkins Pipelines — Scripted & Declarative
- Jenkinsfile — Writing & Managing
- Groovy Scripting & Jenkins DSL
- Multi-Branch Pipeline Projects
- Jenkins Shared Libraries
- Blue Ocean Interface

Plugin Management & Integrations

- Plugin Installation — SonarQube Scanner, Artifactory, JACOCO, SSH Agent
- Deploy to Container, Publish Over SSH, Maven Integration
- Role-Based Authorization Strategy
- Integration with Git, Docker, Kubernetes, Ansible, Terraform

Administration

- Jenkins Security — Users, Roles & Permissions
- Master/Slave (Agent) Configuration — Cloud Agents, High Availability
- Jenkins Backup, Migration & CLI
- Port Number Configuration & Views
- CICD Implementation for Node.js / Java Projects

■ Hands-On Labs:

- Install Jenkins, configure plugins & global security
- Create freestyle & pipeline jobs with Git + Maven
- Configure master-slave architecture
- Build end-to-end CI/CD pipeline with deployment

Module 11: AWS CodePipeline, CodeBuild & CodeDeploy

- AWS CodeCommit — Repository Creation, Commit & Pull
- AWS CodeBuild — Build & Package Applications
- AWS CodeDeploy — Deploy Packages to Environments
- AWS CodePipeline — Create, Manage & Schedule Pipelines
- Building an End-to-End Pipeline with AWS Native Tools

MODULE IV | CONFIGURATION MANAGEMENT

Module 12: Ansible — Configuration & Automation

Fundamentals

- Introduction — What is Ansible? Configuration Management Concepts
- Ansible vs Terraform — Push vs Pull Model
- Ansible Architecture & Features
- Installation & Configuration
- Core Concepts — Inventory, Modules, Ad-Hoc Commands, Playbooks, YAML
- Variable Types, Precedence & External Data Access

Ansible Essentials

- Static & Dynamic Inventories
- Common Modules & Playbook Syntax
- Conditionals, Error Handling & Loops
- Variables, Facts & Templates (Jinja2)
- Handlers & Tags
- Group Variables & Host Variables
- Roles & Ansible Galaxy
- Parallelism & Task Execution

Advanced Topics

- Ansible Vault — Encrypting Secrets at Rest
- Ansible & Windows — Authentication, Encryption & Automation
- Jinja2 Templating — Control Structures, Data Manipulation
- Controlling Task Conditions — Failure, Change & Error Recovery
- Reusable Content with Roles — Inclusion Concepts
- Troubleshooting — Logging, Verbosity & Debugging
- Rolling Deployments — In-Place Upgrades, Expand/Contract Strategy

■ Hands-On Labs:

- Install Ansible & configure host inventory
- Write playbooks for multi-server configuration
- Implement roles, vault encryption & templates
- Integration of Terraform and Ansible

MODULE V | CONTAINERIZATION & ORCHESTRATION

Module 13: Docker — Containerization

Core Concepts

- Docker Overview — What is Docker?
- Physical Servers vs Virtual Machines vs Containers
- Docker Architecture & Docker Engine
- Docker Installation (Linux & Windows)
- Docker CLI Overview & Container Commands

Images & Containers

- Docker Images — Building, Tagging & Managing
- Dockerfile — Instructions & Best Practices
- Multi-Stage Docker Builds
- Managing Containers — Run, Stop, Remove, Inspect, Logs

Registry & Distribution

- Docker Hub, Docker Store & Docker Registry
- Docker Trusted Registry (DTR)
- Amazon ECR (Elastic Container Registry)

Networking, Volumes & Compose

- Docker Networking — Bridge, Host, Overlay, None
- Docker Volumes & Persistent Storage
- Docker Compose — Installation, YAML Files & Commands
- Docker App — Multi-Service Applications

Advanced Docker

- Docker Swarm & Services — Cluster Management, Stacks, Load Balancing
- Windows Containers — Setup, Dockerfile & Compose
- Docker Security — Best Practices, Rootless Containers, Distless Images
- Docker Enterprise Edition — UCP, DTR, Backups & Certificates
- Running Docker in Public Clouds — AWS ECS & Fargate

■ Hands-On Labs:

- Install Docker, pull images & run containers
- Write Dockerfiles for custom applications
- Docker Compose for multi-container apps
- Push images to Docker Hub / ECR

Module 14: Kubernetes — Container Orchestration

Architecture & Setup

- Introduction to Microservices, Clustering & Orchestration

- Kubernetes Architecture — Master, Worker Nodes, API Server, etcd
- Installation — Kubeadm, KOPS, Minikube
- Kubectl Commands & YAML Syntax

Kubernetes Objects

- Pods, Namespaces & API Primitives
- Replication Controller & ReplicaSet
- Deployments — Rolling Update & Recreate Strategies
- DaemonSets & StatefulSets
- Services — ClusterIP, NodePort, LoadBalancer
- ConfigMaps & Secrets
- Persistent Volumes & Persistent Volume Claims

Advanced Kubernetes

- HPA (Horizontal Pod Autoscaler) & Metrics
- Health Checks — Liveness & Readiness Probes
- Scheduling — Node Affinity, Pod Affinity/Anti-Affinity, Taints & Tolerations
- Cordon, Drain & Uncordon — Maintenance Operations
- Resource Quotas & Limit Ranges
- Ingress Controller & Ingress Resources
- Load Balancer Service
- Kubernetes RBAC — Authentication, Authorization & Security
- Kubernetes Networking & Service Discovery (DNS)
- Kubernetes Storage Overview — Persistent & Stateful
- Monitoring, Logging & Troubleshooting

Helm & Cloud-Native K8s

- Helm Charts — Understanding, Using & Creating
- Argo CD — GitOps for Kubernetes
- Kubernetes Dashboard
- Native K8s on AWS — Amazon EKS
- Deploy Application Using CI/CD Pipeline

■ Hands-On Labs:

- K8s cluster setup on Ubuntu/AWS using Kubeadm
- Deploy applications with YAML configurations
- Autoscaling & load balancing in Kubernetes
- Helm chart deployment & Ingress setup

MODULE VI | INFRASTRUCTURE AS CODE

Module 15: Terraform — Infrastructure Provisioning

- What is Infrastructure as Code (IaC)?
- Terraform vs Ansible — When to Use What
- Terraform Architecture & How It Provisions Infrastructure
- Installation & Configuration
- Terraform DSL (HCL) — Variables, Resources, Nested Blocks, Expressions, Functions
- Providers — AWS, Docker, Kubernetes
- Resources, Arguments & Attributes
- Maps, Lookups & Modules
- Local State & Remote State Management
- Terraform Workspace & Terraform Registry
- Taint & Update Resources
- Common Commands — init, plan, apply, destroy, show, import
- Null Resource & Local Exec Provisioners
- Terraform Troubleshooting

■ Hands-On Labs:

- Install Terraform & create EC2 instances on AWS
- Write Terraform scripts for VPC, subnets & security groups
- Use modules for reusable infrastructure
- Remote state with S3 backend
- Integration of Terraform and Ansible

Module 16: Packer — Machine Image Automation

- What is Packer? Why Use Packer?
- Packer Constructs — Artifacts, Builds, Builders, Provisioners, Templates
- Packer CLI & Template Configuration
- Creating AWS AMI using Packer
- Provisioning with Ansible in Packer

MODULE VII | MONITORING & OBSERVABILITY

Module 17: Prometheus & Grafana

- Introduction to Monitoring & Observability
- Prometheus — Installation, Setup & Architecture
- Monitoring Applications & Infrastructure with Prometheus
- Grafana — Installation & Dashboard Visualization
- Integrating Prometheus with Kubernetes
- Creating Pipeline Monitoring Dashboards
- Alerting & Notification Rules

Module 18: AWS CloudWatch, CloudTrail & Systems Manager

- CloudWatch — Monitoring AWS Resources & Applications
- EC2 Instance Metrics & Aggregated Statistics
- Custom Metrics & Alarms
- Setting Up Notifications (SNS Integration)
- AWS Service Health Dashboard
- CloudTrail — API Call Logging & Auditing
- Trusted Advisor — Best Practice Recommendations
- AWS Systems Manager — Patch Management & Run Commands

MODULE VIII | AWS CLOUD SERVICES

Module 19: Cloud Computing Fundamentals

- Introduction to Cloud Computing — Client-Server & Distributed Computing
- Why Cloud Computing? Advantages & Benefits
- Cloud Deployment Models — Public, Private & Hybrid Cloud
- Cloud Service Models — SaaS, PaaS & IaaS
- Why AWS? — Market Position & Service Breadth
- Signing Up for an AWS Free Tier Account
- Navigating the AWS Management Console
- Regions, Availability Zones & Edge Locations

Module 20: EC2 — Elastic Compute Cloud

- What is EC2? Features & EC2 Dashboard
 - Instance Types & Instance Lifecycle (Reboot, Stop, Terminate)
 - Amazon Machine Images (AMI) — Choosing, Creating & Sharing
 - Pricing Models — On-Demand, Reserved, Spot, Scheduled, Dedicated
 - EC2 Reserved Instance Marketplace
 - Security Groups & Key Pairs
 - IP Addressing & Elastic IPs
 - Internet Gateways & Network Interfaces
 - Placement Groups
 - AWS CLI for EC2 Management
 - Launching Linux & Windows Instances
 - Connecting Instances from Different Platforms
 - Automated Backups — Snapshots & AMI Creation
 - Importing & Exporting Instances
 - EC2 Instance Protection & Troubleshooting
- **Hands-On Labs:**
- Launch EC2 instances within a VPC
 - Connect EC2 instances to each other
 - Create snapshots, AMIs & launch from AMIs

Module 21: IAM — Identity & Access Management

- Introduction to IAM & Best Practices
- Creating Users, Groups & Roles
- IAM Policies — Managed, Custom & Inline
- Multi-Factor Authentication (MFA)
- AWS Security Token Service (STS)
- Cross-Account Access & Identity Providers
- Delegation of Permissions
- API Keys & Credential Report
- IAM Roles for EC2 & Services

■ Hands-On Labs:

- Create users, groups, roles & custom policies
- Set up MFA & cross-account access

Module 22: VPC — Virtual Private Cloud

- What is VPC? Types of Networks in AWS
- Creating Custom VPCs with Specified CIDRs
- Subnets — Public & Private
- Route Tables & Subnet Association
- Internet Gateway (IGW) & NAT Gateway/Instance
- NACLs vs Security Groups
- DHCP Options Sets & DNS
- VPC Peering — Same Region & Cross-Region/Account
- Transit Gateway
- VPN Overview & Components
- VPC Endpoints
- Network Monitoring with Flow Logs
- Pricing for Amazon VPC

■ Hands-On Labs:

- Create VPC with subnets, route tables & internet gateways
- VPC Peering across different regions
- Set up NAT Gateway for private subnets

Module 23: S3 — Simple Storage Service

- What is Object Storage? Buckets & Objects
- Storage Classes — Standard, IA, Glacier, Deep Archive
- Creating & Deleting Buckets
- Adding, Getting & Deleting Objects
- Bucket Permissions, ACLs & Bucket Policies (JSON)
- S3 Data Encryption Types
- Versioning, Logging & Lifecycle Rules
- Static Website Hosting on S3
- Cross-Origin Resource Sharing (CORS)
- Cross-Region Replication
- S3 Notifications
- Accessing S3 with AWS CLI & SDKs
- EFS (Elastic File System) & Storage Gateway

■ Hands-On Labs:

- Create S3 buckets & manage permissions
- Automate storage class migration with lifecycle rules
- Host a static website on S3

Module 24: EBS — Elastic Block Store

- EBS Volume Types — gp2, gp3, io1, io2, st1, sc1
- EBS Encryption & Performance Optimization
- Instance Store Volumes — Types, Scenarios & Usage

- Creating, Deleting, Attaching & Detaching Volumes
- Mounting & Unmounting Volumes, Increasing Volume Size
- Snapshots — Creating Volumes & AMIs from Snapshots
- Cross-Region Snapshot Copy & Use Cases

Module 25: ELB — Elastic Load Balancing

- What is Elastic Load Balancing? How It Works
- Load Balancer Types — Classic, Application (ALB) & Network (NLB)
- Internal & External Load Balancers
- Listener Configurations & SSL/TLS Negotiation
- Security Groups & Health Checks for Load Balancers
- Cross-Zone Load Balancing & Sticky Sessions
- DNS Failover & Custom Domain Names
- Connection Draining & Troubleshooting

■ Hands-On Labs:

- Create ALB & NLB with multiple target instances
- Configure health checks & security groups

Module 26: Auto Scaling

- What is Auto Scaling? Components & Benefits
- Launch Configuration & Launch Templates
- Auto Scaling Groups — Policies & Configuration
- Target-Based vs Step Scaling
- Using Auto Scaling with ELB
- CloudWatch Alarms for Auto Scaling
- Temporarily Removing Instances, Suspend & Resume
- Health Checks & Monitoring
- Notifications on Scaling Events

■ Hands-On Labs:

- Set up Auto Scaling Groups with CloudWatch alarms
- Integrate Auto Scaling with Application Load Balancer

Module 27: RDS — Relational Database Service

- Introduction to Amazon RDS — DB Engines & Instance Types
- Configuring the Database Server & Creating Databases
- Automatic Backups, Snapshots & Restores
- RDS Security — Security Groups, IAM Integration
- RDS Read Replicas & Multi-AZ Deployments
- DB Instance Replication & RDS Limits
- DynamoDB (NoSQL) — Creating Tables & Querying Data

■ Hands-On Labs:

- Create MySQL RDS & connect via EC2
- Add & filter data from DynamoDB

Module 28: Route 53, CloudFront & SNS

Route 53

- Route 53 as Your DNS Service
- Domain Registration & Configuration
- Public & Private Hosted Zones
- Resource Record Sets & Routing Policies (Latency, Weighted)
- Health Checks & DNS Failover

CloudFront

- How CloudFront Delivers Content (CDN)
- Working with Web Distributions & Objects
- HTTPS & Serving Private Content
- Request & Response Behaviour

Simple Notification Service (SNS)

- SNS Basics — Topics, Subscriptions & Message Data
- Subscribing via Email & Setting EC2 Notifications

Module 29: Serverless — Lambda & API Gateway

- Introduction to Serverless Architecture
- AWS Lambda — Functions, Triggers & Event Sources
- API Gateway — RESTful APIs with Lambda
- Serverless Use Cases & Best Practices

Module 30: AWS CloudFormation

- CloudFormation Essentials — Infrastructure as Code on AWS
- Template Structure — JSON & YAML
- Building S3 Buckets & EC2 Resources with Templates
- Deploying a Website with S3 Bucket Configuration
- Stack Management — Create, Update & Delete

Module 31: AI Services — AWS Bedrock

- Introduction to AI Services on AWS
- AWS Bedrock — Overview & Use Cases
- Integrating AI into DevOps Workflows

MODULE IX | ADVANCED TOPICS

Module 32: Site Reliability Engineering (SRE)

- How SRE Relates to DevOps
- Introduction to SRE — Principles & Practices
- Monitoring — Instrumenting Apps, Collecting Data, Dashboards
- Monitoring with Nagios (Polling) & Elastic Stack (Push)
- Incident Response — Alerting & Postmortems
- MTTR, MTBF & Alert Fatigue
- Testing, Releasing & Automation — Continuous Everything
- Canary Releases — Implementation, Metrics & Evaluation

Module 33: AI Tools for DevOps From DevOps Community

- Code Rabbit — AI-Powered Code Review
- Codeium — AI Code Assistant for DevOps
- Leveraging AI for Pipeline Optimization & Monitoring
MCP Topics

End of Course Curriculum

This curriculum is subject to updates based on industry trends and student feedback.
Additional benefits include: Real-Time Training, Class Recordings, Assignments, Doubt Sessions & Interview Guidance.
